## CURRENT POSITION

Since October 2008 I work at AZTI Marine Research (Pasaia, Spain). Today, I am senior researcher and my work is mainly focused on the Bay of Biscay shelf-slope circulation and mesoscale activity. My current research is based on numerical modelling, different source in-situ and remote sensing data and on high frequency observations of ocean surface currents from HF radar. I have authored/co-authored >28 peer-reviewed papers (h-11), authored/co-authored numerous contributions to international conferences (>70), have supervised 1 successful PhD (2 ongoing), 4 successful MSc candidates (2 ongoing), participated in 4 PhD committees and to the review of several scientific projects, articles and book chapters. Currently, I am participating in JERICO-NEXT (leading JRAP4 in WP4), CMEMS-SE COMBAT, CMEMS UU IBISAR and CMEMS-IN Situ TAC-phase II, LIFE-LEMA (LIFE) and MYCOAST (Interreg Atlantic Area) projects in tasks related to HF radar technology and applications, including the monitoring and forecast of marine litter hotspots.
